

Stillbirth impact report

- **Prevention:** monitoring baby movements to detect fetal growth restriction which accounts for around half of stillbirths
- **Screening:** biomarkers for reduced fetal growth, scanning at-risk women
- **Treatments:** growth restricted babies, diabetes, liver disease

Tommy's Stillbirth Research Centre

UK's only dedicated stillbirth research centre opened in 2010

Placenta Clinic established to care for women and further research

Care pathway reviewed and improved for all families at St Mary's Hospital in Manchester
